ZOMATO DATA ANALYSIS PROJECT

Using Pandas, Matplotlib & Seaborn

SANSKRUTI CHAVAN

Objective

- To analyze restaurant data from Zomato
- To understand patterns in ratings, cost, and popularity
- To derive meaningful business insights

95+

Dataset Overview

Dataset contains 50,000+ restaurant records

Key features:

- Location
- Cuisines
- Ratings
- Cost

https://www.kaggle.com/datasets/rajeshrampure/zomato-dataset

Data Cleaning

- Removed unnecessary columns (url, phone, etc.)
- Handled missing values
- Cleaned rate column (converted to numeric)
- Converted cost into numeric format
- Removed duplicates

Feature Engineering

- Created cost_per_person
- Created rating_category:
- Excellent (≥ 4)
- Good (3–4)
- Average (< 3)

01 Top Cuisines

Insight:

- North Indian and Chinese cuisines dominate the dataset.
- These cuisines are highly preferred by customers.
- Indicates strong market demand for these food types.

02 Rating Distribution

Insight:

- Most restaurants are rated between 3.5 and 4.2.
- Very few restaurants have extremely low or very high ratings.
- Indicates consistent service quality across the platform.

03 Online Order vs Rating

Insight:

- Restaurants offering online ordering tend to have slightly better ratings.
- Convenience plays an important role in customer satisfaction.
- Online presence helps improve customer reach.

04 Table Booking vs Rating

Insight:

- Restaurants with table booking show higher and more stable ratings.
- These are usually premium or well-managed restaurants.
- Better service experience leads to better ratings.

05 Restaurant Type vs Rating

Insight:

- Casual Dining restaurants have both high ratings and high counts.
- Quick Bites are more in number but have slightly lower ratings.
- Indicates balance between quality and affordability.

06 Cuisine vs Rating

Insight:

- Some cuisines consistently receive higher ratings.
- Customer preference and taste influence ratings.
- Helps identify high-performing food categories.

Overall Insights

- Customers prefer familiar and popular cuisines like North Indian and Chinese.
- Dining choices are influenced by a balance of cost and experience.
- Restaurants offering online ordering and table booking receive better engagement.
- Higher votes reflect customer trust and repeated visits.
- Overall, customer decisions depend on convenience, quality, and location.

From this analysis , we can conclude that customer experience , service quality , and convenience play a bigger role than just cost in determining restaurant success .
